Fluorescein

Product Code  F245-6
Store at Room Temperature
Replacement for Product Number F 7505

Product Description
Molecular Formula: C_{20}H_{12}O_{5}
Molecular Weight: 332.3
CAS Number: 2321-07-5
CI: 45350
\( \lambda_{\text{max}} \): 238, 284 nm\(^1\)
Extinction Coefficient: \( E^\text{mM} = 39.8 \) (238 nm), 10.0 (284 nm)
(0.01 M NaOH)
Fluorescence properties:
Excitation wavelength: 460 nm\(^2\)
Emission wavelength: 515 nm\(^2\)
Synonym: Acid Yellow 73

Fluorescein is a fluorophore, which has absorption maxima at 493.5 and 460 nm.\(^3\) However, the fluorescence of this compound is highly pH dependent.\(^4,5,6\) As a pH indicator, this product has a transition between pH 2-4.\(^7\) At pH 4, the solution is colorless, and at pH 4.5, a green fluorescence is exhibited.

This product is an EPA exempt dye that can be used to investigate water flow in rivers and streams. It is routinely used to track the illegal dumping of waste into waterways. Fluorescein was the first fluorescent dye used for water tracing work\(^8\) and is still used for qualitative (visual) studies of underground contamination of wells. It can also be used to determine fluorimeter sensitivity. The disodium salt of fluorescein is the most frequently used fluorophore in assessing tear turnover and corneal permeability.\(^9\) In this application, the excitation wavelength was 475-490 nm and emission wavelength was 510-520 nm with peak fluorescence at pH 7.4.

Precautions and Disclaimer
For Laboratory Use Only. Not for drug, household or other uses.

Preparation Instructions
This product is soluble in 1 M NaOH (50 mg/ml), with heating. It is insoluble in water, benzene, chloroform, and ether.\(^6\) It is also soluble in hot alcohol and glacial acetic acid solutions.
